

# Roadmap Civic Social Media

Building a safe, trusted, responsible, and sovereign social media landscape.

**MAY 2025**

**PUBLIC SPACES, PUBHUBS, CIVIC INTERACTION DESIGN RESEARCH GROUP**

## DEFINITION

Civic social media are digital platforms where **members of communities** can communicate, collaborate, and share information **in a safe, trusted way**.

These platforms are **developed responsibly**, based on **public values**.

They are managed in a **sovereign manner** by organisations and initiatives with a **social mission**.

# Core values

**COMMUNITY-  
CENTRED**

**SAFE AND TRUSTED**

**RESPONSIBLE**

**SOVEREIGN**

**DIVERSE  
ECOSYSTEM**

## CORE VALUES

### Community-centred

Civic social media are designed for communities whose members want to engage with one another, prioritising the well-being of these communities and their members.

They are not optimized for individuals but are designed for collaboration, dialogue, and exchange within collectives.

## CORE VALUES

### Safe and Trusted

Civic social media foster a respectful culture where members feel at home. Their data are protected, and there are mechanisms in place to prevent disinformation.

## CORE VALUES

# Responsible

Civic social media are designed based on public values: autonomy, openness, transparency, sovereignty, human-centredness, and sustainability.

Social interest outweighs commercial interest in both design and management.

## CORE VALUES

# Sovereign

Civic social media are developed and managed by communities themselves or by organisations with a social mission.

These managers are responsible for safeguarding public values and are held accountable for it.

## CORE VALUES

## Diverse ecosystem

Civic social media are part of a broader, interconnected media landscape. They consist of initiatives tailored to specific community needs and organisations, building on each other through open-source principles and shared protocols.

# A roadmap for Civic Social Media

How do we create an  
environment where civic  
social media can thrive?

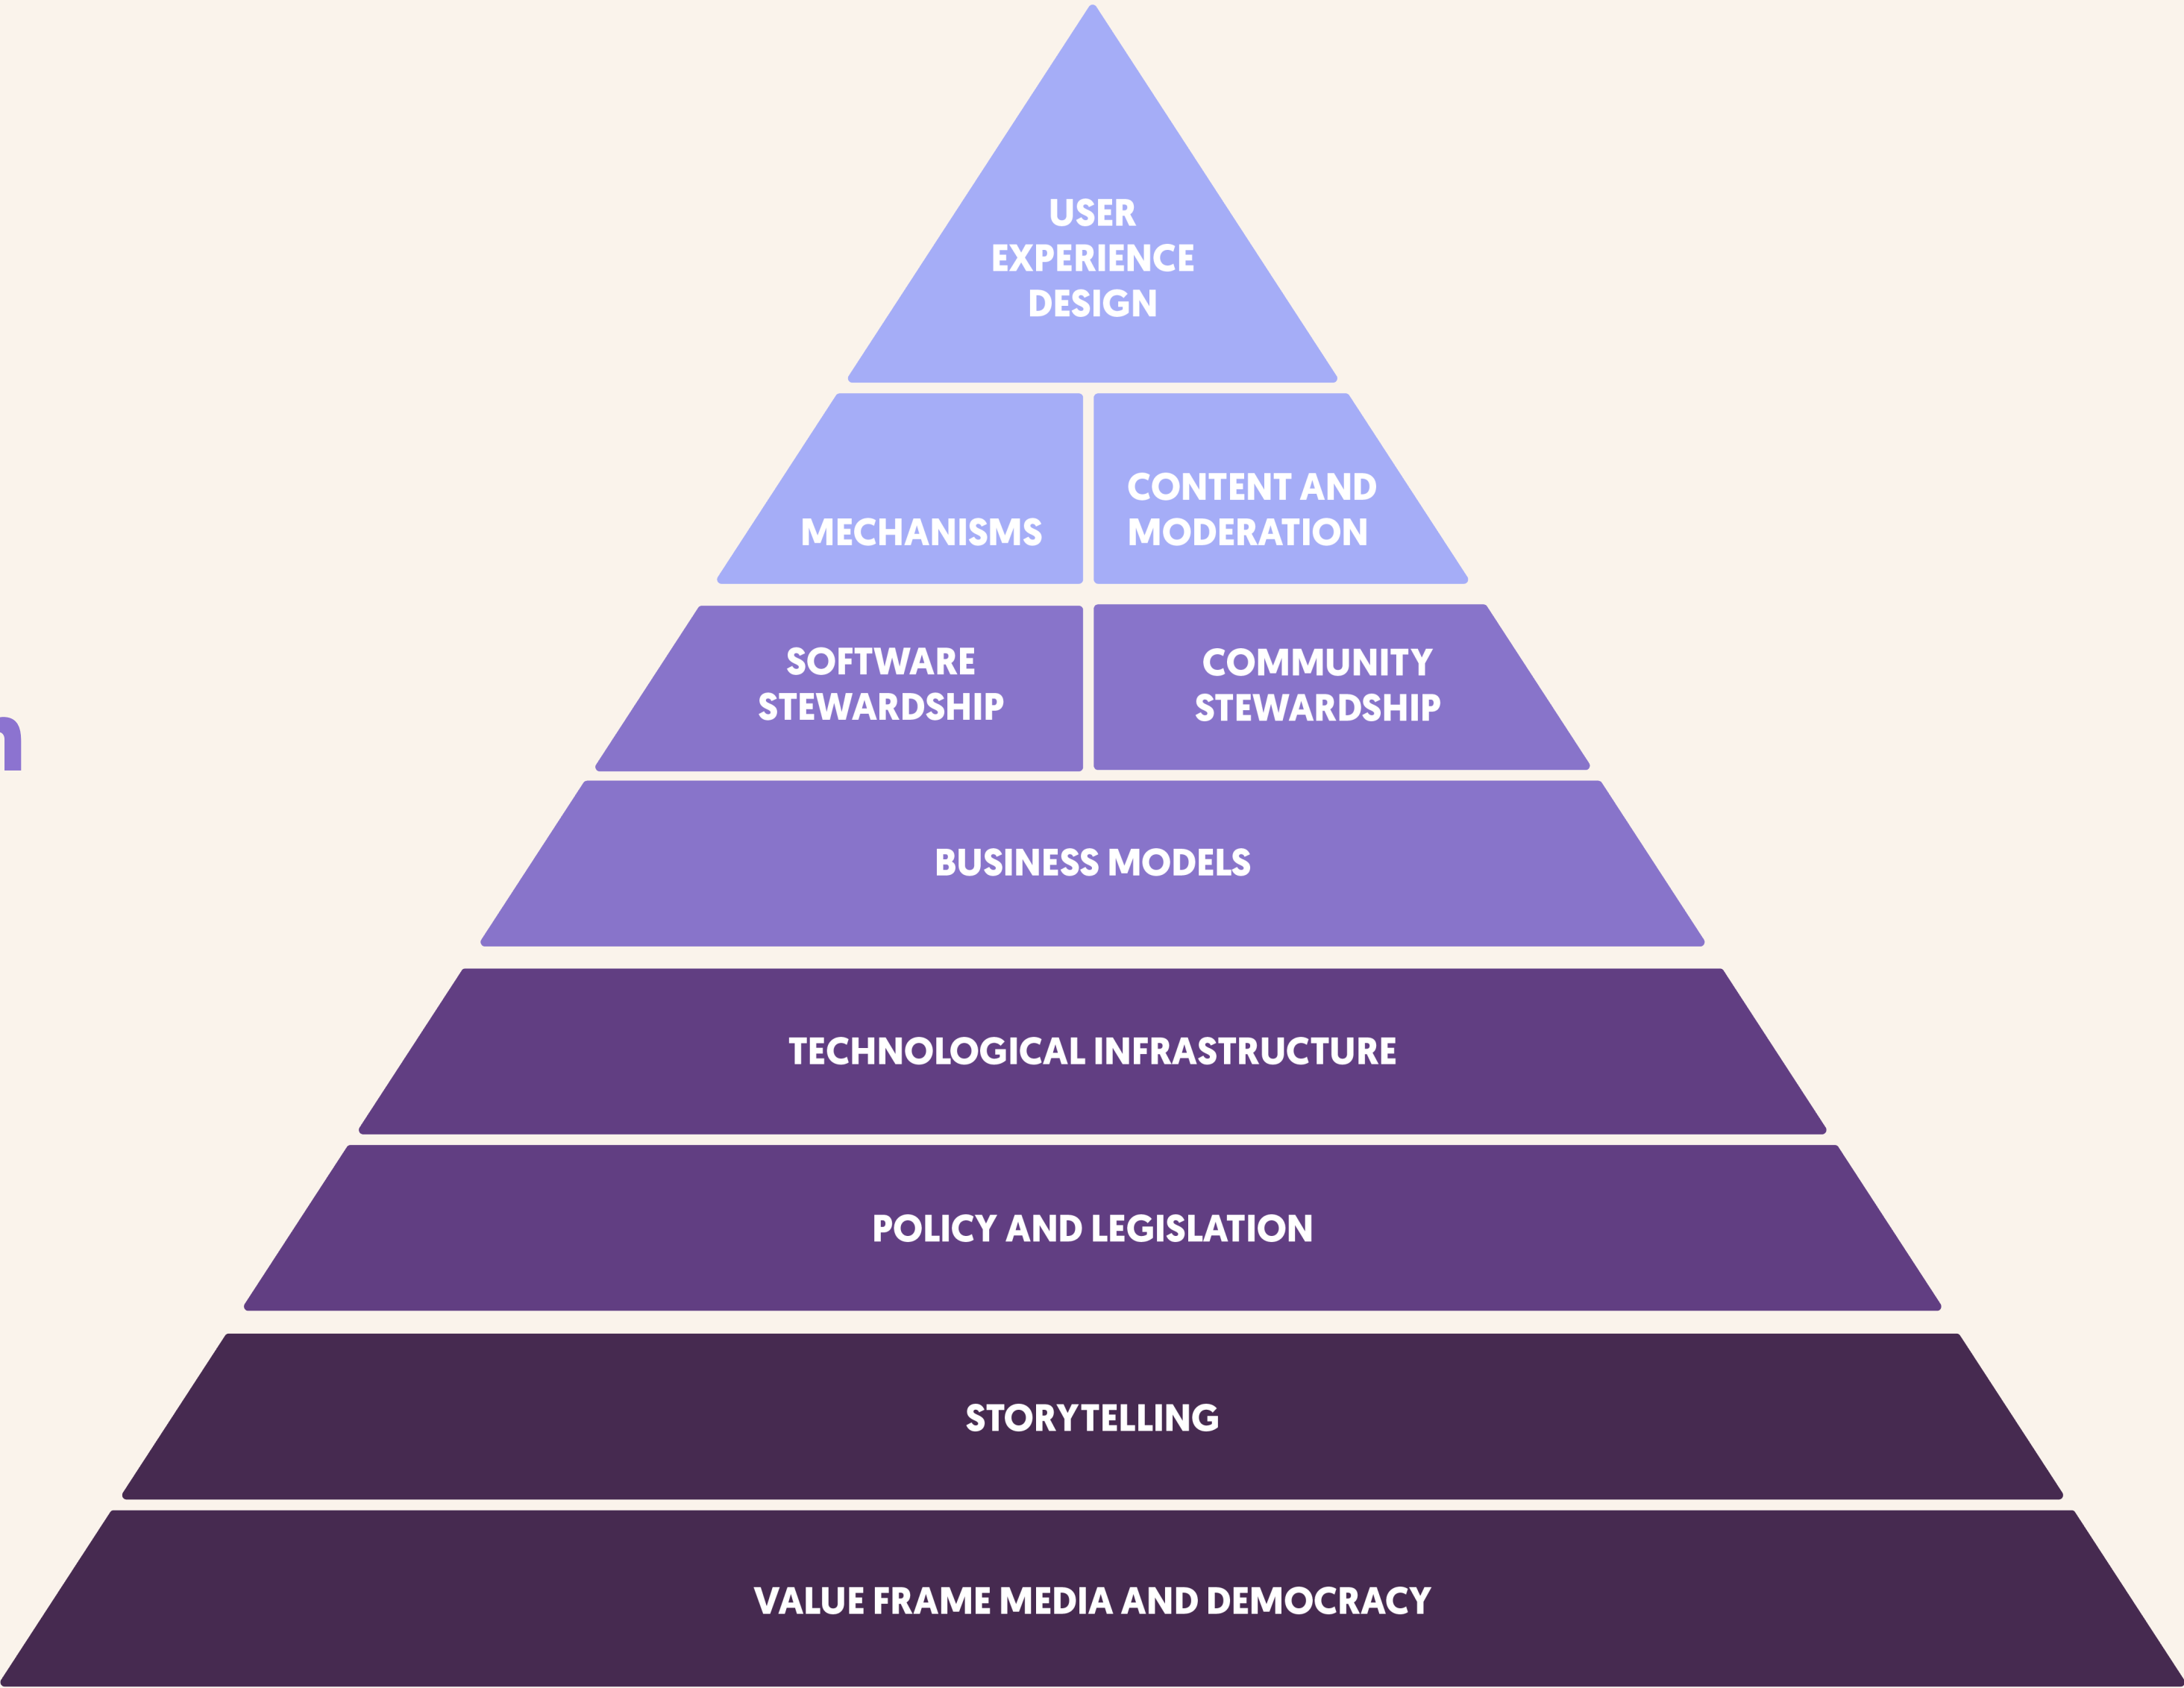

Application

Organisation

Systems

Culture

## Culture

# Value frame media and democracy

## KEY DRIVERS

Growing awareness and evidence of big tech platforms' negative impact

## TASKS

Ground civic social media in theories of democracy, media, and policy

Deepen value frameworks: safety, accessibility, openness, inclusivity

Develop shared terminology and conditions: regulation, requirements, funding

Culture

# Storytelling

## KEY DRIVERS

Public debate on social media, big tech, and democracy

Spotlight on alternatives like Signal, BlueSky, and “Make Socials Social Again”

# Culture

# Storytelling

## TASKS

Targeted lobbying towards policymakers, funders, civil society

Governments as partners and role models

Mobilize networks (libraries, schools, broadcasters) as ambassadors

Guidelines for appropriate platform usage

Citizen movement to promote and normalize civic social media

Culture

# Storytelling

## TASKS

Showcase best practices contributing to public goals through storytelling

**Systems**

# Policy and legislation

## KEY DRIVERS

European regulations (GDPR, DSA, AI Act) as momentum for public values and digital sovereignty

Government's role shift: from regulator to active promoter of public digital infrastructure

## Systems

# Policy and legislation

## TASKS

Government vision on public digital infrastructure including civic social media

Link civic social media to policy areas: safety, sovereignty, well-being, media

Legal basis for funding (e.g. broadcasting fees, road taxes analogy)

Identify relevant and missing legislation

Subtopic policies: digital identity, interoperability

## Systems

# Policy and legislation

## TASKS

Protect children and youth on social media

Vision on supervision: freedom of speech, discrimination, hate speech, dis/misinformation

Reform procurement law: government tasks and limiting rules

Reform subsidy/funding rules for public organisations

Legal models for new organisational forms (e.g., steward ownership) that embed public values

## Systems

# Technological infrastructure

## KEY DRIVERS

Awareness: critical infrastructure is largely in foreign hands

Development of European/national open-source alternatives (cloud, digital IDs)

## Systems

# Technological Infrastructure

## TASKS

Strengthen discourse and plans around public digital infrastructure

Ontwikkelen interoperabiliteit: netwerken, protocollen, afspraken, techniek

Consolidate trusted identity systems (e.g., DigiD, Yivi, Apple/Google ID, Datakluis)

Clarify government role in infrastructure: identity, networks, data portability

## Organisation

# Software stewardship

## KEY DRIVERS

Global civic social media initiatives (PubHubs, Decidim, Pol.is, Mastodon), often open source n)

Funding and management as evolving organisational challenges

## Organisation

# Software stewardship

## TASKS

Experiment with governance, development, and stewardship models

Set up support structures: maintenance, innovation, open source, helpdesk

Develop governance models: accountability, user participation

Compliance oversight: certifications, training, support [e.g., NVJ, CvdM]

Build ecosystem: companies for hosting, design, implementation

Organisation

# Community stewardship

## KEY DRIVERS

Need for public values-based communication platforms and platform management knowledge

AI as moderation tool; concern for algorithmic bias

## Organisation

# Community stewardship

## TASKS

Social media integration strategies, moderation, community management skills

Guides for community stewardship; develop Civic Social Media Canvas

Organisational structures aligned with community interests

Professional protocols: editorial charters, moderation rules, training

Integrate civic social media into broader organizational processes

## Application

User experience design

Content & Moderation

Mechanisms

## KEY DRIVERS

Global civic social media community emphasizes tech design, but UX needs more attention.

# Application

## User experience design

## Redactie & Moderatie

## Mechanismes

### TASKS

Enhance UX and design quality

Design for collectivity, collaboration, connection—role for design education

Develop new mechanisms and information architecture: filters, algorithms, balance individual—collective

Design patterns for curation, selection, filtering

User-friendly onboarding/login; attribute-based authentication

# Application

## User experience design

## Redactie & Moderatie

## Mechanismes

### TASKS

Visibility patterns for people and information

Age restrictions and parental control

Online–offline relationships [e.g., KennisCloud]

From memos to demos: tangible use cases [e.g., mental health]

## COLOPHON & BACKGROUND

This roadmap is the result of a collaboration between the [Civic Interaction Design Lectorate at the Amsterdam University of Applied Sciences](#), [PubHubs](#), [Public Spaces](#), the City of Amsterdam and the Universities of [Nijmegen](#) and [Utrecht](#) on the development of a UX design and Use Cases for PubHubs. This research was made possible by a financial contribution from the [SIDN Fund](#). Public Spaces took the lead in developing the Roadmap.

The themes in this roadmap emerged from desk research into recent developments in the field of social media and the broader [design research trajectory](#) of the AUAS into the User Experience and Use Cases for PubHubs. The focus was on the design of what we have come to call Civic Social Media, and that design angle has also colored this roadmap. Specifically for this roadmap, two additional workshops were organized in which project partners and representatives of various organizations such as Waag, Ypsilon, Rathenau Institute, KennisCloud and the Ministry of the Interior and Kingdom Relations provided input.

Various other research agendas, manifestos and research reports have inspired us, such as the work of Waag on the [Public Stack](#); the [Tech Radars](#) of the Municipality of Amsterdam; the Rathenau programme [Inclusive Social Media](#); the [Rathenau reports on safeguarding public values](#) in the digitalisation of society; the WRR advice on [Media and democracy](#) and [AI](#); and the work of the Commons Network on [digital community goods](#). Concrete examples in the Netherlands we found at [GebiedOnline](#) and [Openstad](#), among others. In the recent public debate we find connections with the activities around the campaign [Make Socials Social Again](#) and various manifestos and position papers that have been published, such as Bert Hubert's Manifesto [Big Tech Alternatives: What should be better](#). Internationally, the work around [New Public](#), [Decidim](#) and [Pol.is](#) has been a source of inspiration, as well as the recent discussions around the [Euro Stack](#), the Nesta report [Towards public digital infrastructure](#), and the work of [Open Future](#).

## COLOPHON & BACKGROUND

We would like to thank Mathilde Sanders, José van Dijck, Bart Jacobs, Jan den Besten, Lian Vervoort, Hugo Jacobs, Skip de Mönnink, Geert-Jan Bogaerts, Jantien Borsboom, Robert-Jan Taling, Jan-Jacob Sikkema, Diana Krabbendam, Miriam van der Beemt, Stefan Diehl, Bert Stavenuit, Imke van Wettum, Ilse Eckelhoff, Bram Klun, Derk Molijn, Richard van Montfrans, Andrei Petrutoni, Frank Prins, Toon Toetenel, Michel Vogler, Ingrid Walschots, Marije Doorenbos, Micky van Zeijl, and all interview and workshop participants and students for their contributions.
